SUPPLEMENTAL DETAILED ACTION

The examiner of record acknowledges receipt of the Response to Notice of Drawing Inconsistency on April 8, 2005. However, it appears that applicant did not receive the present office action sent on March 22, 2005. Accordingly, the examiner of record is resending this office action for applicant's review and response.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

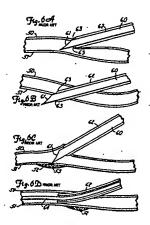

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 16-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Amplatz, et al. in view of Gifford, III et al. and in further view of Cohen.

Application/Control Number: 10/002,329

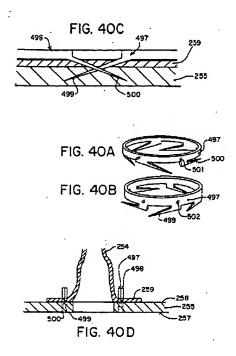

Art Unit: 3763

The Amplatz, et al., patent shows in figures 6A-6D, an access tube (62) having a distal end (63) which can be selectively embedded into tissue, and a needle (61) having a lumen and being configure to pass through the access tube (62) and penetrate into the anatomic space wall, and a guidewire (64).

Amplatz, et al., does not disclose an anchor at the distal of the access tube comprising one or more penetrating points. However, the use of penetrating points in combination with access tubes is conventional as evidenced by the teachings of Gifford III, et al., and Cohen.

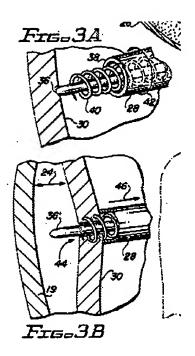

Art Unit: 3763

Gifford III, et al., shows in figures 40A-40D, the use of an anchor structure at the end of an access device. The anchor structure (497) comprises of penetrating points (499,500).

Application/Control Number: 10/002,329

Art Unit: 3763

The Cohen patent shows in figures 3A and 3B, anchoring means at the distal end of access tube (28). Notably, figure 3B illustrates the conventionality of using anchoring means to enhance the accuracy of the access tube in relation to the body tissue.

Additionally, the figure demonstrates how pulling the access tube in a proximal direction (46) after the insertion of the anchoring means into tissue, facilitates the manipulation of tissue layer (30).

Based on the teachings of Gifford, III et al., and Cohen, it would have been obvious for a person of ordinary skill in the art to modify the apparatus in Amplatz, et al., with anchoring means in order to enhance the accuracy of the access tube in the cutting of tissue. Conclusively, the use of anchoring devices in combination with an access tube or cannula would have been considered an obvious design alternative.

Art Unit: 3763

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel Mendez whose telephone number is 703-308-2221. The examiner can normally be reached on 0730-1800 hrs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Brian Casler can be reached on 703-308-3552. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-3590 for regular communications and 703-305-3590 for After Final communications.

Respectfully submitted,

Manuel Mendez
